Model PC Termination Ink Upgrade

In line with our commitment to continuous improvement of our products, Sensors & Controls Division will be introducing a termination ink upgrade for our **Model PC** Panel Control.

Element Collector Ring

The current termination ink used in printing the collector ring is CPC-30. This ink will be changed to Minico 4100, which has improved wear characteristics. Please refer to the photo showing the area where the collector ring is printed on the element.

This termination ink upgrade does not affect fit, form or function of the product. Production transition to the new termination ink started the week of September 18, 2007, with date code 0738M. Qualification test data is available upon request. There will be no changes to MOQ/Mults or price on this product upgrade.

If you have any technical questions regarding this notification, please contact one of our FAEs listed below:
