

Recommended Additions for Certain Bourns® Rotary Optical Encoders

Model EM14 and EN Series

Riverside, California – September 17, 2021 – On April 8, 2021, Bourns issued a [Product Change Notification](#) regarding a change in ASICs for the [Model EM14](#) and [EN Series](#) Rotary Optical Encoders.

Additional testing has revealed that the new ASIC requires one pull-up resistor and one capacitor per channel to substantially reduce or eliminate undesired noise present in the output. Bourns recommends adding a 1K ohm pull-up resistor and a 22 nF capacitor tied to ground for each ASIC channel.

Please see the modified data sheets for the updated schematics.

Implementation date with the new ASIC remains unchanged (and has already passed):

Production date of Rotary Optical Encoders with the new ASIC: May 18, 2021

If you have any questions or need additional information, please feel free to [contact Customer Service/Inside Sales](#).
