

Issue Date: October 05th, 2023

Dear Valued Customer,

This PCN C0472 notice is to inform you that we are making some design changes of several items that you have purchased from Littelfuse.

Description of the Change:

Littelfuse will make design changes to some of our Battery Disconnect Switches which we currently supply to you, in order to improve the mechanical reliability of the products. These changes will not affect the electrical specifications.

Reason for The Change:

The involved components are core, shaft, o-ring, fixed flange and/or cover.
The new design for the mobile core and shaft will increase the safety level of assembling and keep the shaft perfectly aligned with the moving axis.
It has been decided to remove the o-ring due to avoid a potential defect (isolation of the main contact) and lab test demonstrated that there is no change on the IP rating.
The hole diameter from the flange needs to be changed to match with the new shaft design.
A new design for the cover has been applied in order to eliminate not useful features and to fix molding issues.

Effective Date of the Change:

March 4th, 2024

What You Need to Do:

Please review the affected finished goods and the components involved in the “Part numbers affected” file.

If you have any questions, please feel free to contact your Littelfuse Customer Service or Inside Sales Representative. We appreciate your business and our continued partnership.

Sincerely,

Renata Cebada
