### Announcement of TGS5042 Country of Origin Change

Dear Figaro Distributors,

Due to the complex supply chain challenges of the past few years, Figaro has decided to partially shift production of TGS5042 from China to Japan.

While the materials and sensor characteristics will remain the same, the UL Recognized Component Mark will be etched in a different position on the insulation tube (Current: next to the model number / New: next to the sensitivity barcode).

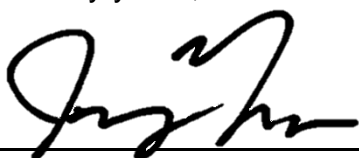

Packing quantity and Port of Loading (Airport of Departure) will not be changed. Also, unless otherwise notified, "Made in China" and "Made in Japan" sensors will not be mixed in a single shipment. However, please note that Figaro reserves the right to determine the ratio of production locations, and that designation of Country of Origin may result in unit price changes.

Mass production in Japan with the new UL mark position will start around September 2023, and the first new sensors are expected to be delivered by the end of this year.

Should you have any questions or requests, please do not hesitate to contact us.

Sincerely yours,

Keisyo (Jimmy) En  
Manager
