1. Purpose

C&K, as designers, manufacturers and suppliers of Switches, constantly look to improve our manufacturing methods and processes to provide customers with the highest levels of quality and innovation.

As part of improvement action, epoxy resin is added on terminals of “A Switch Lock” switches featuring “Shorting contacts” option.

2. Overview

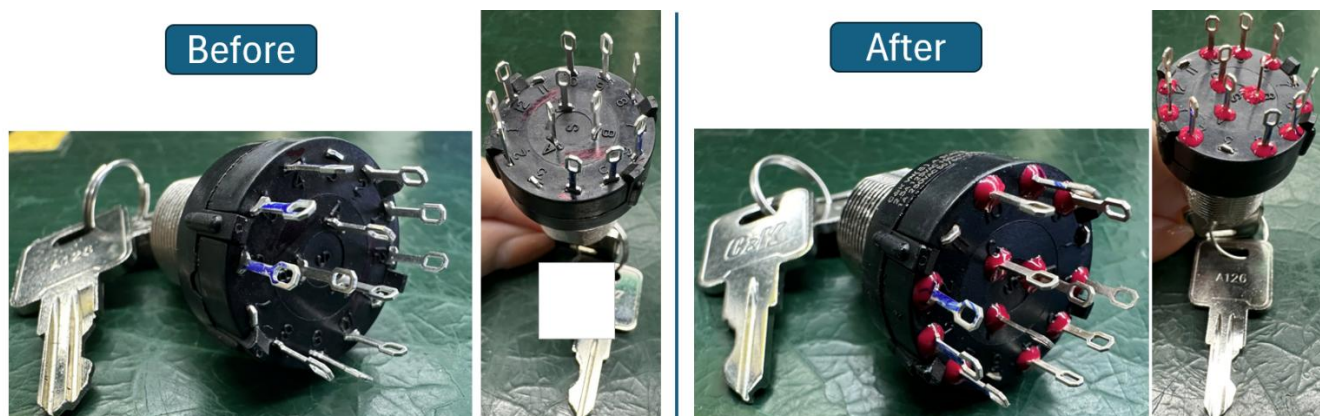

2.1 Change definition

An analysis conducted by C&K showed during actuation of the switch that there was a slight movement of the terminals.

To eliminate this movement and avoid risk of bouncing during the actuation, epoxy is added to stabilize the terminals in the housing.

This action will improve the shorting / MBB (Make-before-break) function of the switch.

All the products with “shorting contacts” are affected by the change.

3. Impact of Change and Qualification

3.1 Impact of Change:

The change does not affect the function of the switches.

Epoxy resin is visible but does not affect the mounting of the switch.

3.2 Qualification method:

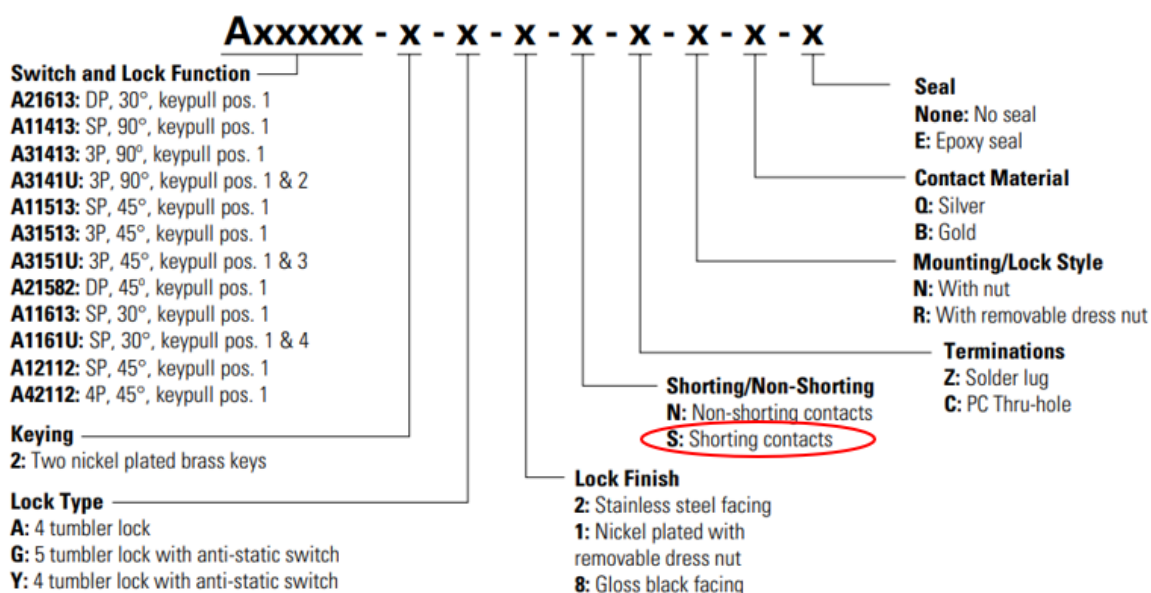

The qualification has been completed in C&K, test report is available upon request.

4. Part numbers affected

Only “**Shorting Contacts**” versions can be affected by this notification.

Ordering Number

To order, simply select desired option from each category and place in the appropriate box. For additional options not shown in catalog, consult Customer Service Center.
