Relocation of production for "Micromodul" series

Dear Sir or Madam,

You are a customer for our MICROMODUL plug connector line

This product line includes the following Lumberg series:

MICS	-	PCB pin strip, vertical
MICSW	-	PCB pin strip, angle version
MICS/SMD	-	PCB pin strip, SMD
MICA	-	ID termination connector for plugging into pin strips
MICAL	-	ID termination connector, solder-in connector

Due to the focus on 2 production plants we have decided to carry out the fully automatic assembly of this line at our new production plant in Poland in the future.

The manufacture of the stamped contacts (stamping technology factory in Schalksmühle) and the manufacture of the injection-moulded parts (Cloppenburg factory) will remain at the same production locations as before.

The relocation will be carried out gradually, so that in the first step, only part of the machine capacity will be moved and we will still be able to deliver from the present location.

Details of the relocation:

1st step CW 05/2013 2nd step CW 11/2013 3rd step CW 17/2013

Inventories of finished parts will be established prior to each relocation step. This is intended to prevent any delivery bottlenecks in the event of unforeseen difficulties in the relocation process.

For the past several weeks, employees from our factory in Poland have been in training at our Cloppenburg factory, to become familiar with the machines.

We are confident that the relocation will not affect you in any way. Nevertheless, we wanted to inform you of this change in a timely manner. We will be glad to answer any questions you may have.

Sincerely

Lumberg Connect GmbH

Peter Bien
