Subject: TR5V parts' change

In order to improve the quality and production capacity of TR5V relay, we plan to change two parts of this relay as follows:

Change 1: Change coil pins' shape and structure

Change 2: Change bobbin' shape and structure

These optimization can meet the requirements of technical specification for the original content, the relay outline dimension unchanged; these will also be approved by UL, These changes will be effected from October, 2022.
