

Product/Process Change Notice - PCN 14_0200 Rev. A

Analog Devices, Inc. Three Technology Way Norwood, Massachusetts 02062-9106

This notice is to inform you of a change that will be made to certain ADI products (see Material Report). Any issues with this PCN or requirements to qualify the change (additional data or samples) must be sent to ADI within 30 days of publication date. ADI contact information is listed below.

Note: Revised fields are indicated by a red field name. See Appendix B for revision history.

PCN Title: ADUM1400/01/02 Die Revision

Publication Date: 07-Nov-2014

Effectivity Date: 05-Feb-2015 *(the earliest date that a customer could expect to receive changed material)*

Revision Description:

Clearly state that propagation delay changes are internal only, no change to total device propagation delay, and no change to the data sheet.

Description Of Change

Design Changes:

1. Increased pulse width of disable signal for refresh block. Increased separation between falling edge of disable signal for refresh block and first refresh high pulse. Increased separation between consecutive pulses on rising edge and refresh high pulses.
2. Reduced the internal propagation delay time of receiver circuitry.

Reason For Change

1. Ensure the driver can reliably send out the refresh pulses. Ensure the receiver can reliably detect all edge pulses and refresh pulses.
2. Maintain the same total device propagation delay time as the original version.

Impact of the change (positive or negative) on fit, form, function & reliability

No change to fit, form, or reliability.
No change to the data sheet.
Improved functionality.

Summary of Supporting Information

Qualification has been performed per ADI0012, Procedure for Qualification of New or Revised Processes. See attached Qualification Report Summary.
