

# BOURNS®

## Product Change Notification

### CHIP RESISTORS

REVISED July 26, 2016

## **Bourns® Model CRA, CRE and CRF Series High Power Current Sense Chip Resistors**

### ***TCR and Resistance Value Range Improvements***

The *Temperature Coefficient of Resistance (TCR)* value of the Bourns® Model [CRA](#), [CRE](#), and [CRF](#) Series Chip Resistors has been improved from  $\pm 275$ ,  $\pm 100$ , or  $\pm 75$  ppm/°C to  $\pm 50$  ppm/°C, uniformly. This improvement impacts all sizes and resistance values of the Model CRA, CRE, and CRF metal strip chip resistor series. The TCR code “Z” ( $\pm 50$  ppm/°C) should be used in all part numbers. The table on pages 2 and 3 shows these changes.

The available resistance range of the CRF Series 0805 size has also been extended from 0.005 - 0.02 ohms to 0.003 - 0.02 ohms.

In summary, the product's TCR has been improved to  $\pm 50$  ppm/°C for all sizes and resistance values. This change has no impact to the fit and form of the product. Electrical performance is improved and quality and reliability criteria have been tightened.

Implementation dates are as follows:

*Bourns will begin phasing in this process: **December, 2016***

*First date code applying the above changes: **1648***

If you have any questions or need additional information, please feel free to contact [Customer Service/Inside Sales](#).
