Bourns® Model 3310 - 9 mm Square Sealed Panel Control Change to Printing Method of the Product Marking

In line with our commitment to continuous improvement of our production processes, Bourns Sensors and Controls is announcing a change in print method to the [Model 3310](#) - 9 mm Square Sealed Panel Control.

The current video ink-jet print process shown in Figure 1 is being changed to a laser print method shown in Figure 2. The laser print method provides a more permanent marking to the product that is not removable with typical cleaning solvents. The laser print marking also enhances the clarity and legibility of the print.

There is no impact to fit or function of the product with this change. This change notification affects all Model 3310 standard and modified-standard parts, and any new part numbers that are available following this notification. A list of active affected part numbers can be found in Table 1 on the following page.

This change is scheduled for implementation in the third production week of September beginning with the date code 537M.
