RE: LFPCN41342 Surface Mounted Automotive and High-reliability TVS Tin plating 2nd source for Business Continuous Plan

To our valued customers,

To implement Littelfuse Business Continuous Plan, our Wuxi plant has qualified new Tin plating supplier of Jiangyin Sunny Orient Technology Co., Ltd (**Suyang**) as 2nd source. The qualification has been finished by end of 2019, and during this Corona-Virus (COVID-19) breakout, we would like to implement this 2nd source site urgently to support our continuous production and delivery.

Suyang has been qualified to automotive AECQ101 criteria and also IATF169494 certified and has been in production for other Littelfuse products.

We would provide in another attachment the qualification report including Suyang certifications, also the impacted PNs (Automotive TPSMx, SLD8Sx and all Hi-Rel TVS) are all listed as appendix in the end of qualification report.

We would implement this 2nd source site by Feb. 24th 2020, without any FIT/Form/Function change.

This PCN is for your information and acknowledgement. If you require any specific data or product samples to certify this change, please contact Littelfuse® within 10 days of the notification date.

If you have any other questions or concerns, please contact your Littelfuse® local sales.

We value your business and look forward to assisting you whenever possible.

Best Regards,
Charlie Cai
Product Manager Automotive and Hi-Rel TVS
