Discontinue for Lithium Primary Batteries ER Series

Dear Valued Customer,

coming back to our information on April 26th 2017 for the severe fire that has broken down our production partner's facility we want to inform You today for the decision by VARTA Product Management not to continue that Category for 3,6 V Lithium Primary Batteries.

Since this severe fire accident in April 2017 we were unable to support running BIZ as well as new projects.

A re-start after the successful reinstallation of production needs a complete approval process in house as well as for all of our customers. This will require huge resources and time and leads us to the decision to change the strategy for our Lithium Primary Range.

We sincerely apologize for that inconvenience of discontinuing in supply of ER Batteries.

We always appreciated our professional relationship and thank You again for your cooperation.

For sure we continue with our complete range of Lithium Primary Batteries CR Series (3,0V).
Please visit our homepage for further information: <https://www.varta-microbattery.com>

With best regards
