Subject: Regarding the change materials of the Mitsubishi high frequency  
high power MOSFET module RA series

Regarding the materials change of Mitsubishi RF Power Module(RA series),  
We report to withdraw this as follows.  
We apologize about some concerns and inconvenience in customer side.

1. Conclusion

We will continue production the current version of RA series.

2. Reason of withdraw

- 1. We received some indication from many customers about the timing issue for change.  
We re-considered to coordinate this issue based on each customer requirement.  
However, It is difficult to coordinate development schedule of each customer and  
a release timing of new modules.
  
- 2. On the other hand, we have received approval for this change from some customer.  
This means that we have to prepare 2 production lines.  
However, it is also difficult to prepare 2 production lines , current material line and  
new material line.

Best Regards
