Subject: HTC-150M Product Change Notice

Dear Valued Customer:

Due to an increased demand for higher flammability rated products, the material used to produce the HTC-150M (Snap-On Cover for HTC-15M) has been changed. This material change is a significant upgrade to the existing part. Dimensionally, the part will not change. Visually, the part remains clear and will be more transparent. The enhanced features include:

- Flame class rating increased from UL94 HB to UL94 V2
- Relative thermal index increased: RTI from 50°C at 1.5mm to 130°C at 0.8mm
- Better transparency

We apologize for the delay that may have been caused by this change and look forward to providing you with a high level of service moving forward.

Thank you,

Steve Dawson
Senior Product Manager - Electronic Circuit Protection
