Subject : Addition of marking (UK CA) to labels

This customer notification refers to a cosmetic change on the labels. No changes to form, fit and function of the affected fuses.

With regards to the above reference, there will be an additional marking  added to the labels of the affected fuses.

Products affected are all fuses with CE mark on labels on the packaging and carton boxes.

This change is only the addition of the below marking to the label and does not impact form, fit and function of the fuse itself.

What has change?

Below pictures are two examples of the labels for two of the different kinds of fuses from Littelfuse to show the before and after comparison.

As can be seen from the pictures, the difference is only the addition of the  besides the CE mark.

1) For Cartridge fuses

Current Label	Updated Label

What is maintained?

- a. Fuse part number
- b. Electrical Characteristics
- c. Fuse Resistance value
- d. Fuse Dimension
- e. Agency Certificate Number

When is the target implementation?

This will be a running change but by 1st January 2023, all labels will have the  marking added.

Best regards,
Daniel Wang
