Subject: Product Change Notice - PC-Tron Series Color Change

Effective immediately, Cooper Bussmann has changed the resin color used in the cap of the PC-Tron Series of radial leaded, fast-acting fuses.

This resin color change does not alter the flammability rating, form, fit, function or electrical properties. Nor does this resin color change affect the available lead lengths/styles, the available packaging or options.

This does result in a change to the cap's color for the entire fuse series. The old color was yellow and the new color is dark tan. Laser part markings retain all text and graphic elements as before, although the text may appear darker as a result of the resin color change.

Complete specifications are available at [PC-Tron Datasheet](#).

If you have any questions or concerns about this Product Change Notice, please contact your local Cooper Bussmann Sales Representative or Applications Engineering at FuseTech@CooperIndustries.com.

Thank you for your business and cooperation with this transition.
