**Subject:** Product Labeling - Acquired Products from ON Semiconductor

Dear valued customer,

Following our labeling communication of January 6<sup>th</sup>, we wanted to provide an additional update regarding the labels being used on the reels and reel boxes. Since the SAP cutover on February 27, 2017, you may have noticed two (2) labels on the reel and two (2) labels on the outside of the reel box as shown below in Figures 1 and 2.

Figure 1 is the label ON Semiconductor uses to help trace material through their system, while Figure 2 is the label used by Littelfuse to trace material through our system.

Figure 1

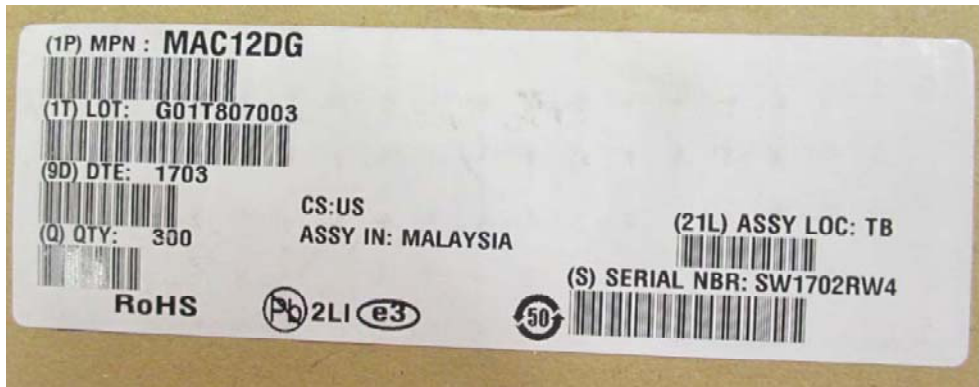

Figure 2

Figure 3 is an example of the labels customers will see on the reel upon opening the reel box.

Figure 3

Both labels on the reels and reel boxes will continue to appear on all products until manufacturing is transferred entirely to Littelfuse manufacturing sites, however, we ask that customers use only the lot number on the Littelfuse label for full lot traceability.

If you have any questions or concerns, please contact Betty Rogers.
