Minor modification of lid of CoinPower

Dear VARTA Microbattery Customer,

In order to continue increase of production capacity and to improve efficiency, we decided to do a minor modification on the lid of the CoinPower cells.

Every CoinPower cell lid (CP1254, CP1454 and CP1654) will have three small notches (each 120°) on the outside of the cup. Those notches will be visible on the side of the cell marking.

The modification will start at the cell production in Germany according following time schedule:

CP1254: cw50

CP1454: cw49

CP1654: cw03

Pictures (with modification) below:

This change will improve the handling of the parts in different stages of the production.

All mechanicals dimension (cell outer diameter and height) as well as the cell performance will be unchanged.

This change doesn't have any effect on welding ability on the cells surface.

Please contact me with any further questions.

Best regards,
Matthias Dorsch
